1 Podcast Analysis Preparation

Individual assignment, Part 1 (5%) — selecting an industry podcast on green advertising and preparing questions for a focus-group peer interview.

Industry podcast selected: “The AMP Moment — Green Advertising and Sustainability (Episode 2).”

Consent

Do you consent to your voice being recorded by your peers for the focus group interview, to be used in the production of the podcast for the assessment? — Yes.

Prior Experience

Have you been involved in making a podcast previously? — No.

Most Important Podcast Elements

Based on the chosen industry podcast, the elements considered most important were: sound quality (clarity of voice) and content (interview style, storytelling).

Discussion Questions for the Focus Group Peer Interview

1. What comes to your mind when you think about eco-friendly?
2. What do you understand from green advertising? What are the pros and cons?
3. What can brands do to effectively support their green and sustainability claims?

2 GreenTalk: A Green Advertising Podcast

Individual assignment, Part 2 (20%) — a 5-minute podcast produced from the Part 1 peer interview, the chosen industry podcast, and supporting literature on green advertising and sustainability.

Podcast: GreenTalk — Green Advertising and Sustainability, hosted by Sumeet Telgote with co-host Nadia. Produced for Part 2 of the Podcast Analysis assignment, incorporating the focus-group peer interview and industry podcast from Part 1, along with supporting literature and global/ethical/social considerations. An audio recording of this episode is saved alongside this portfolio as Podcast(1).m4a.

Introduction

Sumeet: “Welcome to the GreenTalk Podcast, where we explore sustainability, eco-friendly innovations, and how brands can make a positive impact on the environment. I'm Sumeet, your host, and I'm excited to have this conversation today.”

Nadia: “And I'm Nadia. We're thrilled to dive into some key topics on how companies and individuals are embracing greener practices.”

Sumeet: “Before we begin, we want to note that the views expressed here are our own, and this podcast is intended to share insights, not offer professional advice.”

Main Discussion

Sumeet: “In today's episode, we'll be discussing eco-friendly practices and the evolving role of sustainability in the world. So let's start with the first question for you, Nadia.”

Question 1: “What comes to your mind when you think about eco-friendly?”

Nadia: “So the first thing that comes to mind is the use of better material alternatives, whether it be paper straws instead of plastic straws, reusable bags instead of plastic bags, or even bamboo cutlery. It's really about reducing our reliance on single-use plastics and finding sustainable substitutes.”

Sumeet: “That's a great perspective. For me, eco-friendliness often means reducing waste, conserving resources, and choosing sustainable options in our daily lives. It's about making thoughtful choices that minimize our environmental footprint.”

Question 2: “Now, let's shift to green advertising. What do you understand from green advertising, and what do you see as the pros and cons?”

Nadia: “I think businesses will use misleading language to appear eco-friendly or even design their packaging in a way that looks eco-friendly. But they're not genuinely following through on sustainable practices — that's greenwashing, and it's one of the biggest risks with green advertising.”

Sumeet: “I completely agree. Green advertising can be a powerful way to connect with consumers who care about the environment, but it does come with risks. When done poorly or dishonestly, it can lead to a loss of consumer trust and damage a brand's reputation long-term.”

Question 3: “Building on that, what do you think brands can do to effectively support their green and sustainability claims?”

Nadia: “I think the higher-ups in businesses should create a proper strategy for their industrial practices — a strategy that can be followed through by their employees — while also emphasizing the importance of transparency in reporting their progress.”

Sumeet: “Exactly. Authenticity and transparency are key. It's not enough to claim you're green — you have to prove it with concrete actions and measurable results. Consumers today want to see real commitments, not just marketing language.”

Canadian Government Tax Incentives Discussion

Sumeet: “One interesting development we're seeing in Canada is the government's push to encourage businesses to adopt more sustainable practices. One of the ways they're doing this is through tax incentives.”

Specifically, through the Accelerated Capital Cost Allowance (ACCA) program, businesses can deduct up to 100% of the costs for clean energy equipment in the first year. This applies to things like renewable energy systems and energy-efficient technology.

Additionally, Canada's Net-Zero Accelerator Fund has allocated over \$8 billion to support businesses in reducing their emissions and transitioning to sustainable operations. This is all part of Canada's broader climate strategy to push companies toward greener practices.

Conclusion

Sumeet: “To wrap up, being eco-friendly is no longer just an option — it's becoming a core expectation for both businesses and consumers. Thanks again, Nadia, for sharing your thoughts. And thank you to our listeners for tuning in.”

Nadia: “Be sure to subscribe to GreenTalk for more conversations on sustainability and the future of eco-friendly practices.”

Sumeet: “Until next time!”
