FINAL PRESENTATION

An Analysis of "Young Consumers' Intention Towards Future Green Purchasing in Malaysia"

1 Final Presentation: Young Consumers' Green Purchasing Intention

Group Final Presentation (10%) — students were assigned a peer-reviewed research paper to analyze and present, reflecting on its content based on the topics covered throughout the semester. Our group analyzed Sharaf, Isa, & Al-Qasa's (2015) study of price, time, and eco-labeling as predictors of young Malaysian consumers' green purchasing intentions. Co-authored with Group F: Ghazal Sadafi, Sina Beiruti, and Arnav Ghosh.

Young Consumers' Intention Towards Future Green Purchasing in Malaysia

Group F

Ghazal Sadafi-T00710061

Sumeet Telgote- T00711269

Arnav Ghosh - T00691862

Slide 1 — Title slide — analysis of "Young Consumers' Intention Towards Future Green Purchasing in Malaysia" (Sharaf, Isa, & Al-Qasa, 2015)

BACKGROUND OF THE STUDY

1. Concept of Green Marketing:

- a. Involves marketing environmentally safe products
- b. Extends to holistic marketing, covering production, consumption, and disposal processes
- c. Reflects growing consumer awareness of environmental issues

2. Gap Between Motivation and Behavior:

- a. Consumers show motivation for green behavior
- b. Discrepancy exists between motivation and actual purchasing behavior
- c. Green product market still developing despite increasing awareness

Slide 2 — Background of the study — the concept of green marketing and the gap between motivation and behavior

BACKGROUND OF THE STUDY

1. Unique Context in Malaysia:

- Green product market in infancy despite environmental campaigns
- Consumer perception differs from Western countries
- Green products seen as expensive and catering to niche market

2. Consumer Spending Patterns:

- Significant spending on groceries and personal care items
- Minimal spending on fresh or potentially green products
- Opportunity for growth in green product marketing

Slide 3 — Background of the study — Malaysia's unique context and consumer spending patterns

CONCEPTUAL FRAMEWORK

Slide 4 — Conceptual framework — price, time, and eco-label as predictors of purchase intention

RESEARCH DESIGN

- Quantitative approach using a questionnaire
- Goal: Assess impacts of price, time, and eco-label on young Malaysians' intent to buy green products

POPULATION & SAMPLE

- Focus: Students at University Utara Malaysia
- Characteristics: Homogeneous, aged Below 18 to 27, representing young consumers
- 250 questionnaires distributed

Demographics	Categories	Frequency
Gender	Male	70
	Female	121
Age	Below 18	1
	Between 18 – 23	167
	Between 23 – 27	23
Ethnicity	Malay	94
	Chinese	73
	Indian	17
	Others	7

Slide 5 — Research design, population, and sample

DATA COLLECTION METHOD

- Questionnaires administered to students
- Data analysis through:
 - Reliability tests
 - Normality tests
 - Correlation analysis
 - Multiple regression analysis
- Variables analyzed: Intention to purchase green products (dependent), price, time, and eco-label (independent)

Slide 6 — Data collection method

Findings

Cronbach's alpha

Correlation Analysis

Regression Analysis

Slide 7 — Findings overview — Cronbach's alpha, correlation analysis, and regression analysis

Cronbach's Alpha

- Conducted to assess the internal consistency or reliability of the measurement scales used in the study.
- Outcomes - values obtained for the dependent and independent variables were acceptable and indicated good reliability.
- Means the measurement scales used to capture these variables are consistent and reliable in measuring the intended constructs.

Slide 8 — Findings — Cronbach's alpha

Correlation Analysis

- Examines the relationships between variables to determine the strength and direction of associations
- Revealed significant positive relationships between the intention to purchase green products and the independent variables.
- Price had a moderate positive correlation ($r = 0.500$), indicating that price perception of green products increases (intention too).
- Time spent searching for green products had a strong positive correlation ($r = 0.850$), **suggesting that** consumers who spend more time searching for green products are more likely to have the intention to purchase them.
- Eco-labels showed a moderate **positive** correlation ($r = 0.457$), still not as strong as price and time correlations.

Slide 9 — Findings — correlation analysis

Regression Analysis

- Helped us to understand the relationship between dependent and independent variables and to **test hypothesis** about these relationships.

Findings - Supported **two** hypothesis while rejecting one.

1. Price has a significant influence on young consumers' intention to purchase green products (**p-value < 0.05**)
 2. Time spent searching for green products has a significant influence on young consumers' intention to purchase green products (**p-value < 0.05**)
- Rejected Hypothesis - Eco-label has a significant influence on young consumers' intention to purchase green products (**p-value > 0.05**)
 - The above outcomes indicate that both price perception and the time consumers spend searching for green products significantly influence their intentions to purchase. However, the presence of eco-labels alone may not be a strong determinant of purchase intentions among young Malaysian consumers.

Slide 10 — Findings — regression analysis and hypothesis testing

Final Findings

Price and time spent searching for green products significantly influence young Malaysian consumers' intention to purchase green products. However, the presence of eco-labels did not show a significant influence on their purchase intentions. This suggests that factors related to pricing and accessibility play a more crucial role in shaping consumer behavior toward green products than eco-labeling alone.

Slide 11 — Final findings

Closing Remarks

1. Limitations of the Study:

- Limited to university students; may not reflect all young consumers.
- Specific university context; affects generalizability.

2. Key Contributions:

- Offers insight into green purchasing intentions of young Malaysians.
- Highlights the need for competitive pricing and accessibility in green marketing.

3. Implications for Stakeholders:

- Businesses: Emphasizes competitive pricing and increased accessibility for green products.
- Policymakers: Suggests enhancing green product incentives and consumer awareness.

4. Concluding Insights:

- Price and time are critical to young consumers' green purchase intentions
- Suggests actionable areas for more effective green marketing strategies
